

# Module 2 Homework

## Java Swing Homework: Task Tracker Application

**Project Description:** In this homework assignment, students will create a Java Swing application that allows users to track and manage personal tasks. The application should have multiple panels for different functionalities.

### Requirements:

#### 1. Main Menu Panel (20 points):

- The application should have a main menu panel with buttons for different actions.
- Include buttons for "Add Task," "View Tasks," and "Exit."

#### 2. Add Task Panel (20 points):

- When the "Add Task" button is clicked, a new panel should open.
- This panel should have text fields for entering task details: title, description, and due date.
- Include a "Save" button to add the task to the list.

#### 3. View Tasks Panel (20 points):

- When the "View Tasks" button is clicked, a new panel should open.
- This panel should display a list of tasks with their details (title, description, due date).
- Include a "Mark as Complete" button for each task.
- Completed tasks should be visually differentiated from incomplete ones.

#### 4. Error Handling (20 points):

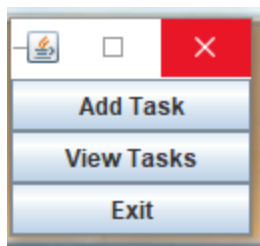

- Implement appropriate error handling for invalid inputs or other exceptional conditions.
- Display meaningful error messages.

#### 5. Code Quality (10 points):

- The code should be well-structured and follow best practices.
- Proper indentation, meaningful variable names, and comments are used.

### Grading Rubric:

- **Main Menu Panel (20 points)**
  - All buttons are functional and perform their respective actions (Add Task, View Tasks, Exit).
- **Add Task Panel (20 points)**
  - Task details can be entered and saved successfully.
  - Appropriate error handling for invalid inputs.
- **View Tasks Panel (20 points)**
  - Displays a list of tasks with their details.
  - "Mark as Complete" button works as expected.
  - Completed tasks are visually differentiated.
- **Task Data Storage (10 points)**
  - Tasks are successfully stored and retrieved between program executions.
- **Error Handling (10 points)**
  - Proper error handling for invalid inputs or other exceptional conditions.
- **Code Quality (10 points)**
  - Code is well-structured and follows best practices.
  - Proper indentation, variable names, and comments.
- **Extra Credit (up to 10 points):**
  - Extra features or improvements beyond the basic requirements.
- **Total Score (100 points)**

Task Tracker
