

Module 5 Homework

```
/**
 * Recursive Java program to generate all combinations of characters in a string.
 */
public class CombinationGenerator {
    /**
     * Recursive method to generate all combinations.
     *
     * @param input The input string.
     * @param current The current combination.
     * @param index The current index.
     */
    public static void generateCombinations(String input, String current, int index) {
        // Base case
        // Recursive case
    }

    /**
     * Main method to test the generateCombinations function.
     *
     * @param args Command line arguments (not used).
     */
    public static void main(String[] args) {
        // Input
        // Output
    }
}
```

```
/**  
 * Grading Rubric (Maximum 100 points):  
 * - Correct implementation of base case and recursive case: 40 points  
 * - Proper documentation (comments): 20 points  
 * - Correctness of the main method and output: 20 points  
 * - Code structure and formatting: 20 points  
 */  
}
```

Points 100
