

Module 5 Programming

```
/**
 * Recursive Java program to solve the Tower of Hanoi problem.
 */
public class TowerOfHanoi {
    /**
     * Recursive method to solve the Tower of Hanoi problem.
     *
     * @param n      Number of disks.
     * @param source Source peg.
     * @param auxiliary Auxiliary peg.
     * @param destination Destination peg.
     */
    public static void towerOfHanoi(int n, char source, char auxiliary, char destination) {
        // Base case
        // Recursive case
    }

    /**
     * Main method to test the towerOfHanoi function.
     *
     * @param args Command line arguments (not used).
     */
    public static void main(String[] args) {
        // Input
        // Output
    }
}
```

```
/**  
 * Grading Rubric (Maximum 100 points):  
 * - Correct implementation of base case and recursive case: 40 points  
 * - Proper documentation (comments): 20 points  
 * - Correctness of the main method and output: 20 points  
 * - Code structure and formatting: 20 points  
 */  
}
```

Points 100
