

Module 5 in-class Coding II

```
/**
 * Recursive Java program to calculate the power of a given base and exponent.
 */
public class Power {
    /**
     * Recursive method to calculate the power.
     *
     * @param base    The base.
     * @param exponent The exponent.
     * @return The result of base^exponent.
     */
    public static int power(int base, int exponent) {
        // Base case
        // Recursive case
    }

    /**
     * Main method to test the power function.
     *
     * @param args Command line arguments (not used).
     */
    public static void main(String[] args) {
        // Input
        // Output
    }
}
```

```
/**  
 * Grading Rubric (Maximum 100 points):  
 * - Correct implementation of base case and recursive case: 40 points  
 * - Proper documentation (comments): 20 points  
 * - Correctness of the main method and output: 20 points  
 * - Code structure and formatting: 20 points  
 */  
}
```

Points 100
